

On Thursday, August 01, 2019, SSI will be performing planned maintenance in our Production environment between 6am - 8am CST (4am - 6am PST).

This release of CareAlign, 3.6.11.0 will address the following list and will only impact the CareAlign portal and not CareExchange (XDS, XCA, XDR).

This update will address the following issues:

Returned or Enhanced Functionality:

- * Mailbox Folders
 - o Users can create new folders for sorting
 - o Messages can be moved to folders for sorting
 - o Bulk moving of messages has been added
 - o Archive folder is present for unwanted messages (cannot delete messages)
- * Email Notifications will be sent consistently to users for new messages
- * Mailbox messages can be searched by keyword
- * Mailboxes can no longer be Published/Unpublished. All Mailboxes are always Published.
Corrected Issues/Bug Fixes:
- * Messages toggling read/unread has been stopped (however another unrelated problem causes them to all appear as read right now)
- * Saved signatures will be applied to new messages (not yet working for replies and forwards)
- * Inbox message list will now page correctly if there are more than 20 messages
- * Sent folder To line issues have been corrected and should show only correct To addresses
- * Messages Link is no longer tied to user's current vault

SacValley does not require any action from our members. We will send out further notifications to everyone as to any other specifics that need to be communicated
