

On Wednesday, April 28, 2021, SSI will be performing a planned upgrade to our PRODUCTION environment between 6am and 8am Pacific Time.

This release of CareAlign, 3.7.5.3 will address the following list and will only impact the CareAlign portal and not CareExchange (XDS, XCA, XDR, eHealthExchange).

This update will address the following issues:

- CURES Interface Service (API)
- CURES Application Development (user management, query, reporting module, monthly reports)
- Changed width of Year field for Extended Search to improve display appearance
- Reworked Vault Manager functionality to display more/better information
- Added ability to edit Vault data from CareAlign
- Fixed bug related to the Patient List feature not always releasing session locks Multiple changes to the On-Demand CCD were made to allow it better reflect that the document was generated by CareAlign and that data for specific items came from data in specific vaults
 - Add representedCustodianOrganization and representedOrganization to on-demand non-Encounters in CareAlign
 - Update CareAlign on-demand CCD to populate assignedAuthoringDevice for assignedAuthor in CareAlign

THIS UPDATE ALLOWS FOR PORTAL USERS TO ACCESS THE CALIFORNIA PRESCRIPTION DRUG MONITORING PROGRAM (CURES). USERS WHO WOULD LIKE THIS FUNCTIONALITY WILL NEED TO SUBMIT AN UPDATED USER FORM TO INCLUDE: DEA#, NPI#, AND PHYSICIAN NAME.

PLEASE REVIEW THE CURES TIP SHEET ON THE FOR MEMBERS PAGE.

SacValley does not require any action from our members. We will send out further notifications to everyone as to any other specifics that need to be communicated.
